My assumptions (revisited)

You (probably) know Python

You may or may not know Java

■ None ■ < 6 months ■ 6-12 months ■ 12-24 months ■ > 24 months

Java experience

Learning a new human language

“Die Sonne scheint.”

“das Gift”

“Der Fisch schwimmt.”

Learning a new programming language

```
int i = 5;  
int j = 6;  
int k = i + j;
```

k == 11

```
System.out.println("hello" * 2);
```

error

```
System.out.println("hello" + 2);
```

"hello2"

Python and Java concepts from survey

What happened last year in JP2

End of the course:
Students assumed
Python worked like Java

Start of the course:
Students assumed Java
worked like Python

What you should (hopefully) learn this year

Underlying concepts of computer programming

- Concepts that you already know from Python or other languages (loops, variables, arrays, etc)
- Concepts that may be new (objects, inheritance, exceptions, etc)

How they are expressed in Java

- And Python
- ... and hopefully any other languages you might know or might later learn!
